Appl. No. 10/797,172

Art Unit 3617

In The Claims:

1. (Original) A method in a multi-mode wireless communications

device capable of operating in CDMA and GSM communications modes, the

method comprising:

operating the multi-mode wireless communications device in

CDMA communications mode;

while operating in CDMA communications mode, generating an

origination message including information indicating an ability of the multi-

mode wireless communications device to operate in GSM communications

mode.

2. (Original) The method of Claim 1, generating the origination

message includes setting a first field indicating that the origination message

includes second field indicating that the multi-mode wireless

communications device is able to operate in GSM communications mode.

3. (Original) The method of Claim 2, generating the origination

message includes setting the second field to indicate that the multi-mode

wireless communications device is able to operate in GSM communications

mode.

4. (Original) The method of Claim 3, setting the second field

includes indicating whether the multi-mode wireless communications device

is capable of communicating in at least one of a GSM single-slot mode and a

GSM multi-slot mode.

2

- 5. (Original) The method of Claim 1, transmitting the origination message while operating in CDMA communications mode.
- 6. (Original) The method of Claim 5, receiving a channel assignment message, in response to sending the origination message, while operating in CDMA communications mode, the channel assignment message including GSM assignment information.
- 7. (Original) The method of Claim 6, receiving the channel assignment message includes receiving an instruction to acquire a GSM network before receiving a channel allocation.
- 8. (Original) The method of Claim 6, receiving the channel assignment message includes receiving a GSM channel allocation in the channel assignment message.
- 9. (Original) The method of Claim 1, indicating that the message includes additional mode information by setting a flag indicating that additional mode information is included in the message.
- 10. (Currently Amended) A method in a multi-mode wireless communications device capable of operating in first and second communications modes in corresponding first and second networks, the method comprising:

operating the multi-mode wireless communications device in the first mode communications mode on the first network;

Confirm No. 4057

Appl. No. 10/797,172

while operating in the first communications mode, generating a

message including information indicating an ability of the multi-mode

wireless communications device to operate in a second communications mode

on the second network,

the message is either [one of] an origination message [and] or a

page response message.

11. (Previously Presented) The method of Claim 10, generating the

message includes setting a flag indicating the presence of the information

indicating the ability of the multi-mode wireless communications device to

operate in the second communications mode.

12. (Original) The method of Claim 10, indicating an ability of the

multi-mode wireless communications device to operate in a third

communications mode on one of the first and second network.

Claims 13-18 (Canceled)

19. (Currently Amended) A method in a CDMA communications

network, the method comprising:

generating a channel assignment message;

providing GSM channel assignment information in the channel

assignment message;

transmitting the channel assignment message from a network

infrastructure entity to a wireless communication device operating in the

CMDA communications network.

4

- 20. (Original) The method of Claim 19, providing GSM channel assignment information in the channel assignment message includes providing information indicating that additional GSM channel assignment information is provided in the channel assignment message.
- 21. (Original) The method of Claim 19, providing GSM channel assignment information in the channel assignment message includes providing assignment information for one of a GSM access grant channel or a GSM dedicated channel.
- 22. (Original) The method of Claim 19, providing GSM channel assignment information in the channel assignment message includes providing information to re-send one of an origination message or page response message on a GSM Channel.

23. (Original) The method of Claim 19,

transmitting the channel assignment message to a wireless communications device connected to the CDMA communications network,

providing the GSM channel assignment information in the channel assignment message includes providing a direct channel assignment.

24. (Original) The method of Claim 19,

transmitting the channel assignment message to a wireless communications device connected to the CDMA communications network,

providing the GSM channel assignment information in the channel assignment message includes providing an access grant channel for the communications device to complete set up on the GSM network.

25. (Currently Amended) A method for network resource allocation in a first communications network, the method comprising:

receiving a message from a multimode mobile station;

generating a channel assignment message for the multimode mobile station operating in a first communications <u>mode</u> on the first network in response to the message;

assigning the multimode mobile station to a second network in the channel assignment message;

transmitting the channel assignment message to the multimode mobile station.

- 26. (Original) The method of Claim 25, assigning the multimode mobile station to a second network in the channel assignment message includes providing a direct channel assignment in the channel assignment message.
- 27. (Original) The method of Claim 25, assigning the multimode mobile station to a second network in the channel assignment message includes providing an access grant channel for the communications device to complete set up on the second network.
- 28. (Original) A method in a multimode communications device, the method comprising:

receiving a channel assignment message while operating in a first mode pursuant to a first communications protocol,

"Operating Mode Extensions in Wireless

Communications Networks"

Atty. Docket No. CS23879RA

Appl. No. 10/797,172 Confirm No. 4057 Examiner J. Contee

Art Unit 3617

the channel assignment message including channel assignment

information for a mode of operation pursuant to a second communications

protocol;

transitioning to one of an access grant channel or a dedicated

channel based on the channel assignment information for the different mode

of operation.

29. (Previously Presented) The method of Claim 28, operating

pursuant to a second communications protocol pursuant to the different mode

of operation.

30. (Previously Presented) The method of Claim 28, the first mode

is CDMA mode, the second mode is GSM mode.

Claims 31-32 (Canceled).
